1985 FIRE WEATHER AND SEASONAL SEVERITY

The stage for the 1985 fire season was set in December, 1984, when large areas of the eastern United States, from New England to Florida, experienced 4 to 8 degree temperature departures above normal. The warm temperatures were accompanied by below normal preciptiation amounts ranging from 10-25 percent of normal in southern Florida to 75 percent of normal in New England. The majority of the northwestern United States, including northern California, Idaho, southern Nevada, and Utah was cold and dry at the end of 1984. The eastern United States cooled off dramatically in January, 1985 to 6-8 degrees below normal while continuing to be very dry. The West remained cold and dry in January, and dry areas extended into southern California, southern Nevada, Utah and western Arizona.

In February, winter in the eastern states ended slightly warmer than normal, while Florida and the coastal areas of Georgia, South Carolina, and New England remained very dry with percipitation dramatically below normal. The West in February remained cold and dry and dry areas expanded into Colorado an New Mexico. The general trend of warm and dry in the East and cold and dry in the west continued through March and April, although some areas of central California, central Nevada, Utah, and Colorado received above normal precipitation in March. Temperatures edged slightly above normal in the west in late April.

Most of the east and west coast states were in severe to extreme drought by May 1985, and May itself brought normal to slightly above normal temperatures to the entire United States. The critically dry areas in the southeast and northeast states remained dry. Most of the west remained dry except for islands of 100-200 percent above normal

precipitation in cental Oregon, central Utah, and central New Mexico. June continued moderate to extreme drought in many areas of the east from Maine to Florida, while extreme drought prevailed in large areas of northern and southern California, northern Washington, central Idaho, and most of Montana. The remainder of the west suffered moderate drought. June temperatures remained at or slightly above normal in all drought areas. While some areas along both coasts received upwards of 150-200 percent of normal precipitation; however this was not enough to signicantly affect most critical drought areas.

July and August temperatures averaged 6 to 8 degrees above normal throughout the United States. Precipitation increased dramatically in the East during July and August. Although this did not end the drought, the amounts were normal to 150 percent above normal in both months over broad areas and had a significant impact on fire starts and resistance to conrol in the East.

Fire season in the West was slightly dampened in July with rainfall in most western states. Amounts ranged from 100-400 percent of normal precipitation in central and northern California, Utah, Colorado, eastern Oregon, southern Idaho, western Wyoming, and eastern Montana. August became very dry again ranging from 0-50 percent of normal precipitation throughout the West except for 100-400 percent of normal in central Idaho, northewestern Wyoming, and all of Montana.

Burning conditions eased as September turned wet in the West with a succession of low pressure systems dropping out of the gulf of Alaska and into the western United States, bringing temperatures well below normal and precipitation well above normal in most areas.

1985 FIRE ACTIVITY SUMMARY

The 1985 fire season required record-setting interagency mobilization of personnel and equipment. Person-caused fire activity aggrevated by continued drought began in December, 1984 in the southeast, and, with the exception of a brief break in April, continued on to peak in July.

Forest Service assistance to the States began in January, when devastating fires prompted the Governor of Florida to declare a state of emergency. In June seven national overhead teams were committed to the southeast, the most ever to this area.

Meanwhile, Colorado and South Dakota also had project fires, soon followed by California. By mid-June, extreme fire activity had spread from California into Oregon and the Great Basin. During the height of the fire season, from mid-June through August, a record number of project fires burned in the western states.

The overall fire situation required a massive response from all parts of the country. The National Interagency Fire Coordination Center moved more people and other resources over a broader geographical area in a shorter period of time than ever before in its 20 year history. More than 17,000 fire fighters were mobilized at one time from all cooperating agencies.

Major Forest Service fires included California's Wheeler and Gorda-Rat fires which consumed 118,000 and 56,000 acres respectively, and the Las Pilitas fire burned 75,000 acres of the Los Padres National Forest. In Idaho, the Long Tom complex including the Savage Creek and French Creek fires burned 55,240 acres of National Forest Lands.

The military was alerted to the possibility of assisting in wildfire suppression and 1,000 personnel were trained for that event.

All contract airtankers were committed, as well as five additional call-when-needed airtankers and eight military C-130's equipped with Modular Airborne Firefighting Systems (MAFFS). In addition, large charter or contract air transports flew an unprecedented number of flights.

In early August there was an unusually intense fire season in Alaska. Firefighting resources were flown from the lower forty-eight States to combat the Alaska fires. By late August, activity moderated in Alaska, but continued in the lower forty-eight until September rain allowed some demobilization.

California, Oregon, and Washington continued to experience fires associated with east winds, and the fire season was not over until general rain fell in late October. By this time, fire fighters had been involved in suppression for ten consecutive months.

By the end of the 1985 fire season a total of 10,179 wildfires had burned a total of 461,708 acres of National Forest System lands in the United States.

LARGE WILDFIRE OCCURRENCE

There were 126 Class E (300 to 999 acres) and larger wildfires in 1985. The 69 Class F & G wildfires listed below account for 86% of the total National Forest System lands burned by wildfire.
